

Scenario 1 — Search Functionality

✗ Weak: "Test the search feature."

What's missing: No product type (e-commerce, hospital),
no filter/sort behavior, no empty/invalid input scenarios, no performance angle.

Instruction – Generate test case for the Search functionality for the ALM tool

Context – There is a ALM tool cloud based application contains tracker types like requirements, risks, release, specification, test cases, test run, test sets and defects and there will be a search option available in all the tracker type

Example – Test Case ID | Test Case Name | Description | Prerequisites | Test Step Action | Test Step Expected result | Evidence Required | Status

Persona – Act as a functional Tester

Output – output should be in CSV file

Tone – Test Case should have proper QA standard

Scenario 2 — File Upload

✗ Weak: "Generate test cases for file upload."

What's missing: No file types, no size limits,
no success/failure criteria, no security angle (malicious file upload).

Instruction – Upload the correct file into JIRA and produce error if file format is not supported

Context – User wants to create multiple story in JIRA for that the user has to upload a CSV file into JIRA which should not exceed 2GB file of Word, Excel and PDF

Persona – Act as a Admin

Output – multiple stories should be displayed in sequential order in the Todo list

Tone – All the stories should be precise and readable format

Scenario 7 — Dashboard / Report Generation

✗ Weak: "Test the reports section."

What's missing: No report type (PDF/Excel/CSV), no date range filters,
no data accuracy validation, no permission-based visibility.

Instruction – Generate a python code for building a report or dashboard with Power Bi Integrated

Context – I want to build a power bi reports for defect aging report which should show the cards with each bucket 0-3 days, 3- 7 days and more than 7 days. Also filter should be available for to select the release. Priority and Severity of the defects in the respective bucket should be displayed in pie chart

Example- In reports page, it should display with Cards (for aging) , Pie chart for severity, bar graph for priority

Persona – Act as a powerbi developer

Output – Report should get displayed in the application and it can be downloaded as PDF/Excel

Tone – It should be align with coding and QA standards
